## PHILIPP Corner guard

VB3-B-006-en - 03/16

Data sheet

### PHILIPP Corner guard

The PHILIPP Corner guard for prefabricated building is used as an edge protection for e.g. columns and panels in industrial buildings, hospitals, parking garages etc. and thus prevents damages to the concrete caused by impact of e.g. vehicles.

The Corner guard can be supplied with different angle and reinforcement types so that it meets different requirements. A 92° fold of the profiles guarantees a perfect fit to the mould and a perfect concrete surface, too.

The Corner guard is available in hot-dip galvanised steel as well as in stainless steel SS304 and SS316. Supplied as ready-to-install including welded reinforcement.
